Project Design Phase-I
Proposed Solution Template

Date	27 feb 2026
Team ID	699d5fd23074df695bbbb160
Project Name	Metro Ticket Generating System (ServiceNow)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional metro ticket booking often requires passengers to stand in long queues at ticket counters or purchase physical tokens. This process can be time-consuming and inefficient. The problem can be solved by developing a digital system that allows users to book metro tickets online and automatically generate ticket records and QR codes for verification.

2.	Idea / Solution description	The proposed solution is a Metro Ticket Generating System built on the ServiceNow platform. Users can access the Service Portal, select the source and destination stations, enter passenger details, and submit a request to generate a metro ticket. The system automatically calculates fare, stores ticket data in a custom database table, and generates a QR code that can be scanned at the metro station.
3.	Novelty / Uniqueness	This project demonstrates how ServiceNow workflow automation can be used to simulate a real-world metro ticketing system. By combining Service Catalog forms, Flow Designer automation, and QR code generation, the system provides a unique example of applying enterprise workflow platforms to transportation ticketing solutions.
4.	Social Impact / Customer Satisfaction	The system improves passenger convenience by reducing waiting time at metro ticket counters and enabling quick digital ticket generation. QR-based verification helps passengers move quickly through entry points, improving overall travel experience and customer satisfaction.

5.	Business Model (Revenue Model)	The system can generate revenue through metro ticket fares, digital passes, and potential integration with online payment systems. Metro authorities can also use ticket data analytics to improve route planning and passenger management.
6.	Scalability of the Solution	The system is designed to be scalable and can support additional metro stations, routes, and cities. Future enhancements could include mobile app integration, online payment gateway support, email/SMS ticket delivery, and analytics dashboards for metro authorities.
